FIRE WEATHER

Fire Weather in 1981 varied greatly throughout the nation. Overall, the total acreage burned was well below the average while numbers of fires were up considerably. This was quite an accomplishment since many Regions had below normal rainfall and in many areas the drought conditions were severe to extreme.

Regions 4 and 8 had significant fire activity with both Regions experiencing one of their more severe fire seasons in many years. Region 4 experienced one of their worst years on record for range and grass fires.

Region 1 experienced a season slightly above normal in terms of numbers of fire and acres burned while other Regions were well below their averages. This was the case even though some areas experienced severe drought conditions. Some of this can be attributed to effective and aggressive initial action and interagency cooperation.

LARGE FIRE OCCURRENCE

There were 112 Class E and larger fires that burned in 1981. Class F and G fires listed below accounted for 86 percent of the total area burned.

ATTAINMENT

In 1981, 90 percent of all fires were controlled at 10 acres or less in size, on approximately 180 million acres of Forest Service protected lands. Less than 1 percent burned 300 or more acres each. Wildland fires burned approximately 1/10 of 1 percent of the acres protected by the Forest Service.
